

Dynamic Triage Assessment

Target: G:\Users\PC
User\AppData\Local\WhatsApp\app-0.2.936\resources\app.asar

PIPELINE	Automated Triage Pipeline
CASE ID	vanko-c-drive
PREPARED BY	Autonomous DFIR Agent
REPORT DATE	2026-06-12 UTC

01 Executive Summary

Analysis of triage data reveals that the WhatsApp desktop application is experiencing network interception, likely due to a captive portal or transparent proxy. While initial findings focused on DNS resolution failures (e.g., 'The remote name could not be resolved: 'web.whatsapp.com''), a deeper review of 'main-process.log.0' uncovered a critical 'Invalid release entry: ' error. This indicates the application is receiving HTML content instead of the expected update manifest. The DNS errors are likely a symptom of this broader network interception. Additionally, the 'Network Action Predictor' database requires further investigation to correlate URL prediction history with these failed update attempts.

02 System Profile & Evidence Scope

PROPERTY	VALUE
Target Evidence Path	G:\Users\PC User\AppData\Local\WhatsApp\app-0.2.936\resources\app.asar
Analysis Timestamp	2026-06-12 10:36 UTC
Analysis Tooling	Autonomous MCP Framework

03 Extracted Artifacts Matrix

ARTIFACT NAME / IDENTIFIER	FORENSIC ANALYSIS & DESCRIPTION
WhatsApp Main Process Log (Error)	Log file containing critical 'Invalid release entry: ' error, suggesting network interception.
WhatsApp Main Process Log (DNS)	Log file containing repeated 'The remote name could not be resolved: 'web.whatsapp.com'' errors, likely a symptom of network interception.
Network Action Predictor	SQLite database containing URL prediction and network history, to be correlated with failed update attempts.
WhatsApp Auto Updater Error	Process ID 9940 repeatedly failing update checks.
NetworkUXBroker Prefetch	Prefetch file for NetworkUXBroker.exe, potentially related to network activity.
Flash Cookie	Flash cookie found in Macromedia directory, indicating potential tracking or ad-capping activity.
