

Dynamic Triage Assessment

Autonomous Forensic Report

PIPELINE	Automated Triage Pipeline
CASE ID	vanko-c-drive_CYLR
PREPARED BY	Autonomous DFIR Agent
REPORT DATE	2026-06-14 UTC

01 Executive Summary

The investigation of the provided triage data reveals a mix of standard user activity and dual-use tools. While forensic tools (FTK Imager) and secure deletion utilities (SDelete) are present, they are common in administrative or enthusiast environments. Sensitive documents ('Research to Weaponize the Ion Thruster.docx') were identified, but no definitive evidence of exfiltration or unauthorized access exists in the filesystem artifacts. Network telemetry was unavailable for analysis.

Null Hypothesis Evaluation: The user is a researcher or security enthusiast utilizing standard tools for data management and secure file handling. This is supported by the presence of legitimate forensic and utility software, but cannot be fully confirmed without access to execution logs or network traffic to verify the intent behind the sensitive document access.
